- # 4. No "MRL" issues for export.

SIZER XL

1 gallon per acre every 7 days

SIZER XL is an excellent source of highly soluble phosphorus and potassium for all long term crops.

Pre-bloom, foliar applications of SIZER XL supplement and enhance rapidly depleting soil reserves of pre-plant phosphorus and potassium.

Effective phosphorus and potassium nutrition post bloom is essential for maximum fruit size and production. SIZER XL will more effectively supply the right amount of phosphorus and potassium as pre-plant soil reserves are depleted.

Apply 1 gallon of SIZER XL every 7 days, beginning at pre-bloom through early harvest.
