- # 3. **ONLY** a **4 Hour REI/0 day PHI** which outperforms other products that have up to a 48 hour to 5 day REI.
- # 4. No "MRL" issues for export.

## ***SIZER<sup>®</sup> XL***

**1 gallon per acre every 7 days**

SIZER XL is an excellent source of highly soluble phosphorus and potassium for all short term crops, especially those that are mechanically harvested, requiring uniform, compact plants.

After planting, pre-bloom, foliar applications of SIZER XL supplement and enhance rapidly depleting soil reserves of pre-plant phosphorus and potassium, on both sandy and high-organic soils.

Plant soluble sources of phosphorus and potassium during bloom through pre-harvest are essential for maximum production. SIZER XL will more efficiently supply the right amount of phosphorus and potassium as pre-plant soil reserves are depleted.

Apply 1 gallon of SIZER XL every 7 days, beginning at pre-bloom through pre-harvest.
